SUMMARY

Full-Stack Developer with 2 years of production experience on a live enterprise inventory and financial management platform (Java / Spring Boot · ReactJS · MySQL/MariaDB). Build full-stack web applications and RESTful web services, with a specialization in SQL stored procedure optimization and financial module development across purchasing, inventory, sales, and reporting — cutting report load times by 60–70% and resolving 150–200+ production tickets. Experienced mentoring junior developers and translating business requirements into correct, auditable system behavior. Quick to ramp on large, unfamiliar codebases. Open to mid-level full-stack or backend roles, on-site in Cebu or fully remote.

PROFESSIONAL EXPERIENCE

Alliance Software Incorporated

July 2024 – Present

Technical Specialist I — Cebu, Philippines

Enterprise inventory & financial management platform (purchasing, inventory, sales, GL / AP / AR).

- Design, develop, test, debug, and maintain full-stack features across a ReactJS frontend and Java / Spring Boot backend on a live, multi-business-unit enterprise platform, following established coding standards.
- Built ReactJS components integrated with Spring Boot RESTful web services, including data-heavy reporting grids (Wijmo FlexGrid) spanning purchasing, inventory, sales, and financial screens — ensuring consistent, reconcilable output across all modules.
- Cut high-volume financial report load times by ~60–70% by refactoring stored procedures — converting CTEs to temp tables, adding targeted indexes, and rewriting non-sargable date filters — eliminating locking bottlenecks on a MariaDB production database.
- Diagnosed and resolved 150–200+ production tickets across all modules — covering GL journal entry logic, AP/AR reconciliation, serial-number tracking, concurrency race conditions, and XLSX/PDF export defects.
- Owned production-critical financial modules end-to-end within 18 months; partnered with business analysts and QA to translate business requirements into correct, auditable system behavior.
- Mentored and onboarded OJT developers on system architecture, stored procedure design, and Git-based development workflows, reducing their ramp-up time significantly.

Tech stack: JavaScript, ReactJS, Java (Spring Boot), MySQL/MariaDB, SQL Stored Procedures, REST APIs, Wijmo, Git, Azure DevOps, Sourcetree.

AboitizPower Corporation

July 2023 – August 2023

Customer Experience Intern

- Assisted in creating frameworks and wireframes for project presentations within the Customer Experience team.

PROJECTS

OJT Management System with ML (Research Paper)

Aug 2023 – June 2024

- Full-stack prototype integrating sentiment-analysis text classification and fuzzy logic for host-company evaluation; built frontend and backend in JavaScript with a web API and Docker deployment.

SPRINGBOARD: Validating Project Ideation

Jan – June 2023

- Full-stack application using React, .NET, MongoDB, and Git with GPT API integration; recognized as an AppCon finalist (OTIS Philippines Inc.) for innovation in web/mobile development.

EDUCATION

Cebu Institute of Technology – University

Aug 2020 – June 2024

Bachelor of Science in Computer Science

SKILLS

Technical: JavaScript, ReactJS, Java, Spring Boot, RESTful Web Services, SQL, MySQL, MariaDB, SQL Stored Procedures, HTML5, CSS3, Responsive Design, JSON, Git, GitHub, Sourcetree, Azure DevOps (CI/CD), Wijmo.
